Connect Beyond Your Business

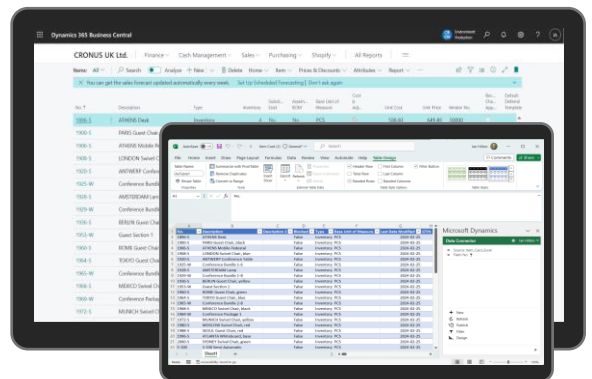

Microsoft Dynamics 365 Business Central is the world's most popular mid-market ERP system, with well over 200,000 installations.

Its feature rich functionality allows you to manage your entire business from within a single application.

Dynamics 365 Business Central is designed to automate and integrate your business processes out of the box, helping you to better engage with your customers, optimise your operations, empower your employees, and transform your products and services.

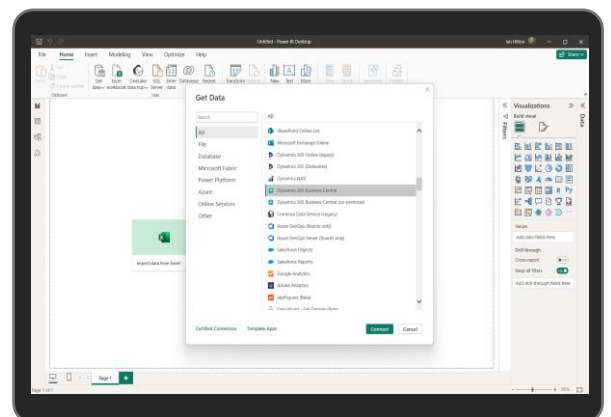

Make Better, Faster Business Decisions

Dynamics Business 365 Central makes it easy to work with your data. You can use its native integration with Excel to quickly extract, analyse and even update your data with just a few clicks.

Dynamics 365 Business Central has Business Intelligence built into the heart of the application with an array of the most popular Power BI analytical reports pre-built and ready to instal from the Microsoft AppSource.

Building your own reports is made simple too. Dynamics 365 Business Central is designed for easy connectivity through its open API model. Using Power BI, you can connect to the pre-built views in Web Services to model your data, and design and build impactful analytics.

The Microsoft Ecosystem

Dynamics 365 Business Central is a central pillar within the Microsoft ecosystem of cloud-based applications, tools and services that provide seamless integration and a feature rich user experience without the large capital outlay in expensive technology and infrastructure.

Microsoft's open API architecture and common data services model has opened up D365 to a wealth of 3rd party apps. Whether it is a webstore you want to integrate or online banking and payment services, getting them installed and setup is a simple, painless process.

Just like your mobile phone, Microsoft have also built their own marketplace where partners can provide cost-effective apps to tailor and enhance your Dynamics 365 Business Central environment without the usual investment in expensive programming resources.

Ready to Deploy?

Let's be honest, deploying an ERP system is a considerable undertaking and can be disruptive for any business, but Economit's deployment methodology aims to minimise that disruption as much as possible.

Our experts will take the time to fully understand your business and its unique competitive proposition to design and tailor your Dynamics 365 Business Central solution to meet your exact requirements, we take great care to deliver what you expected at every step in the journey, and we won't move on to the next stage until you are completely comfortable.

Our consultants are business process experts as well as technology experts, so we can advise you on how the capabilities of Dynamics 365 Business Central can streamline and automate your business processes in jargon free language that you can relate to.
